Daniel Whitenack 7:35 AM
Thanks @sam!

Samuel Lampa 7:35 AM
It outlines how datalog queries are resulting into dataflow program on-the-fly, and how to make these dataflow programs distributed, and a bit more

The nice thing with this is how well suited Go is for data flow programming (I more or less see Go as a dataflow programming language... and with something like [goflow](https://github.com/golang/goflow) or [flowbase.org](https://github.com/golang/flowbase) you even come a bit closer to the next step, flow-based programming!) (edited)

So, we now just need a flexible query language that generates the Go code for us 😊

Daniel Whitenack 7:37 AM
I really need to look more into this and do some reading/experimenting. I love the thoughts around this.

Daniel Whitenack 7:48 AM ☆
I think I just need to experiment and read to help things sink in.

@sam! do you have a good reference for data flow programming in general?

Along with the video above.

Samuel Lampa 7:52 AM
@dwhitena Apart from the (pretty fragmented) plethora of blog posts, there are two nice books. One really short and concise one, outlining the differences between dataflow, reactive and flow based programming: <https://amzn.com/1497422442> ... that I think should be a good start.

Then, for going deeper into FBP, John Paul Morrisons FBP book is the way to go: <https://amzn.com/1451542321> ... it is much longer, and much less focussed though, although it contains a lot of interesting insight. (edited)

Otherwise, where I learned through doing, was by playing around with Slibrov's GoFlow library (<https://github.com/trustmaster/goflow>).

Also, the FBP mailing list is shock-full of super-interesting discussions, and very very insightful people (mostly IT veterans from industry): <https://groups.google.com/forum/#!forum/flow-based-programming>

Otherwise, wikipedia should of course not be forgotten. I know the FBP guys have tried to keep the FBP article up to date lately. https://en.wikipedia.org/wiki/Dataflow_programming
